

Our Story

Our Story

Established in October 2016, WaterTech Centre Sdn. Bhd. (WaterTech) is a registered licensed training provider under the banner of Human Resource Development Fund (HRDF) in Malaysia. Its sister company, a water specialist company, Engineering Protocol Sdn. Bhd. (EPSB) which is an engineering company was earlier set up in August 2006.

Involved in water reticulation design, civil construction, project management and non-revenue water consultancy service, Engineering Protocol was anchored in water infrastructural works. In complementing Engineering Protocol's core business, it was therefore only inevitable for the eventual set up of WaterTech Centre as a company that delivers high quality training programmes.

WaterTech was mooted with the idea of providing quality-driven, efficient, effective and customised training packages on water education studies in the country, which benefits the employer, employee and the participants. In partnership with internationally renowned skilled training providers, WaterTech now conducts invaluable training sessions to up-skill industry workforce and develop talents in this sector.

WaterTech Centre features its invaluable Water Asset Management Programmes which are vital in up-skilling and re-skilling those in the water industry to enable them to improve

the water asset management methodology in Malaysia.
